IDEAS TO FARM. EVERYDAY.

DIRECTIONS

(for milk replacer)

Simply add half the recommended warm water to the milk caddy, start the engine, pour in the milk powder/additives, & add the balance of warm water for the best mixing result.

*"We make calf feeders.
That's what we do.
The milk caddy is bullet
proof, easy to move, and
deliberately slimline."
– Stallion CEO Grant Allan*

1

Add half the water

Preferably use warm water for more efficient energy uptake for the calf.

2

Start the engine

Start the engine before adding the milk replacer.

3

Pour in the milk replacer / supplements

For extra benefits, try adding BioCalf Probiotic Calf Starter to boost immunity and promote gut health.

4

Add the balance of water

To make sure the powder/additives are smoothly & evenly blended.

5

Dispense using hose and flow meter

Simple, accurate, easy, and saves time.

6

Rinse / clean thoroughly

Try Calf Klenz liquid alkali detergent for effective, safe cleaning of all calf rearing containers at hand-washing temperatures. Biodegradable & residue-safe.

7

Empty with built in drain

Allows for a complete gravity drain post-cleaning (it's also important to drain the feeding hose post-cleaning).
