

MOBILE MIXER & DISPENSER FOR CALVES

MILK TAXI

MOBILE MILK DISTRIBUTION. CALF FEEDING MADE EASY.

MilkTaxi makes individual calf feeding quick, easy and enjoyable. Reliably mix milk replacer powder and gently heat or pasteurise whole milk. Accurately distribute milk to calves through pen recognition, flexible feeding curves and DM calculation. With MilkTaxi, your calves receive the right amount of feed, at the right temperature, every time.

Safe & simple feeding

Intuitive, simple operation

Simple, legible display means minimal training for you and your staff. Many functions can be programmed on a timer.

Wireless remote control

With the remote control on the dispensing arm, you can conveniently feed calves up to 10m away from the MilkTaxi.

Dark? Not a problem

MilkTaxi has an integrated LED headlight, making it easy to feed calves at night, even in remote hutches.

Sturdy, 4-wheel chassis

MilkTaxi is extremely sturdy with its low-fulcrum, 4-wheel design. Even when full and travelling at speed, it does not tip over.

All-terrain

Easily clear bumps in the ground or low thresholds with the MilkTaxi's 40cm front wheels and raised ground clearance.

EL-AN electrical drive (optional)

The electrical drive offers stepless adjustment between 2 x forward and reverse speeds.

Efficient & effective features

Simple dosing

MilkTaxi has 9 freely programmable dosing levels, allowing you to dose almost any quantity of feed, without irritating drips.

Powerful floor-mounted agitator

Each milk replacer is dissolved in seconds. MilkTaxi's floor-mounting offers maximum operational stability and doesn't get in the way when cleaning the tank.

Gentle heating

MilkTaxi's unique heating foils warm the milk gently without burning and sticking to the tank. Even high heating capacities of 6kW can easily be achieved.

Pasteuriser (optional)

Dangerous pathogens are killed at 63°C for 35 minutes. All start times can be programmed to suit your requirements, meaning you can program your milk to be fully pasteurised by the time you get to the barn in the morning.

Automatic cooling function (optional)

The automatic cooling function is particularly practical for use with robotic milkers. This keeps the milk fresh and your calves healthy.

Semi-automatic cleaning

You can clean the tank easily through the opening lid. The semi-automatic cleaning program ensures optimum hygiene. Residue from the pump and hose can be discharged fully.

Optional extras

SmartMix CMR calculator

Enter the desired milk replacer concentration and scoop size once and Smart-Mix does the rest. It will calculate the necessary CMR weight automatically and display how many scoops of CMR you need.

Supplement whole milk with CMR

SmartMix recognises how much whole milk has been filled and determines how much water and CMR must be added to achieve the required milk quantity in the required concentration.

AVAILABLE MODELS

MilkTaxi 260

500 litres of feed / day, with optional pasteuriser.

MilkTaxi 260 | Trailer

500 litres of feed / day as trailer unit, with an optional pasteuriser.

MilkTaxi 400 | Trailer

800 litres of feed / day (2 x 400L) as trailer unit, with an optional pasteuriser.
