# Variflo and Flo-Tek jetter range

Designed by Daviesway, these jetter ranges have been an integral part of dairy farm wash systems for more than three decades.

Built to withstand the toughest farm conditions, the robust jetter designs are easy to use, versatile, and the interchangeable back plates allow for limitless installation possibilities. They cover all liner types currently available.

Manufactured to FDA standards, the Daviesway jetter range is made of premium quality, high-impact and corrosive resistant materials.

**Variflo Jetter**

The Flo-Tek Jetter has a one piece moulded body, eliminating the body seal, and includes an inspection plate to check for contamination.

**Inspection plate to easily check for contamination**

## Flow Control

The screw and valve system on both Variflo and Flo-Tek jetters allows the operator to adjust the flow rate through each individual unit, ensuring all cluster receive the same volume of wash solution.

## Non-Return Valve

The integrated non-return valve allows operators to attach clusters to the jetters at any time, even while the rest of the plant is still milking. This can be a significant time saver, especially in rotary dairies.

## Mounting options

Model Mount	38mm pipe	50mm pipe	Hose
Flo-Tek Range		✓	✓
Variflo Range	✓	✓	✓

## Mounting Brackets

The 38mm and 50mm models come with twin high-impact saddles and rubber keepers to securely mount the jetter to the wash line and reduce the chance of rotation.

**38mm mounting kit**

## Backing Plates

The hose mount model comes with a 16mm nozzle suitable for 14mm rubber tubing.

**Base back plate – Hose mount**

**Base back plate – Pipe mount**

## Nozzle Plate

The variflo nozzle plate suits all six styles of nozzles - which are easily replaced when worn or damaged.

**Round plate**

**Square plate only required with cover**
