

Revolution in Fresh Cow Management

An easy to use oral supplement that assists cows around calving to move smoothly into lactation.

Keta-go provides valuable glucose, appetite stimulants and other highly beneficial nutrients.

By providing key nutrients that assist the cow to manage energy use and liver health, Keta-go stimulates appetite, which in turn minimises bodyweight loss. The cow moves more quickly into positive energy balance, and ultimately, improves future reproductive performance.

NEW

Easy to use
Single dose

Increases dry matter intake (DMI)

Keeps herd in positive energy balance

Assists cow's to get back in to calf

AIDS FRESH COWS INCLUDING THOSE WITH;

- Difficult births • Ketosis
